

Describe the Brain Device: Vagus Nerve Stimulation

Describe the device. What does it look like? How does it work?

What are the advantages of this device?

What are the disadvantages of this device?

What are some of the constraints of this device to treat seizures in DRE epileptic patients?

Describe the Brain Device: Deep Brain Stimulation

Describe the device. What does it look like? How does it work?

What are the advantages of this device?

What are the disadvantages of this device?

What are some of the constraints of this device to treat seizures in DRE epileptic patients?

Describe the Brain Device: Responsive Neurostimulation

Describe the device. What does it look like? How does it work?

What are the advantages of this device?

What are the disadvantages of this device?

What are some of the constraints of this device to treat seizures in DRE epileptic patients?
